

WEB BROWSERS

A program used to view things online

Opera

Google Chrome

Safari

Mozilla Firefox

Internet Explorer

Microsoft Edge

SEARCH ENGINES

Let me "Google" that for you...

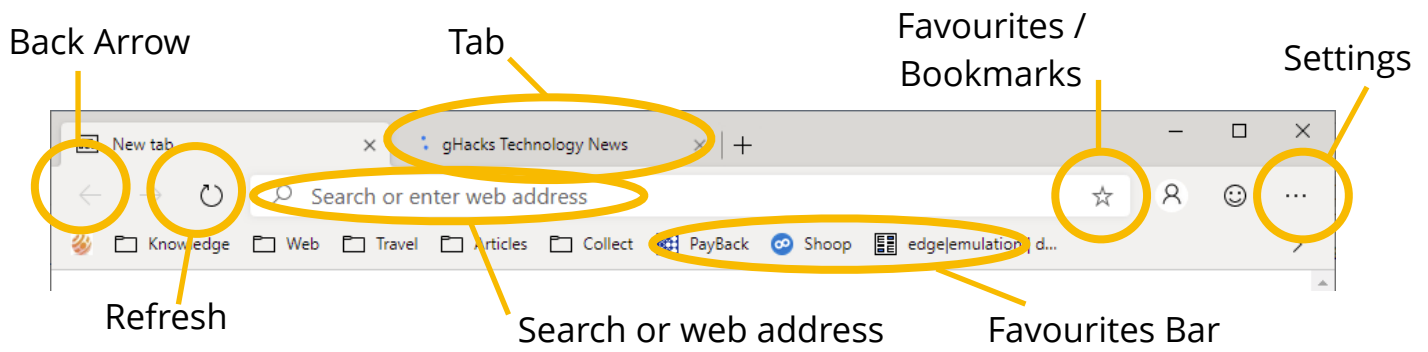

Search engines help you find what you're looking for on the internet. There are many search engines, including those from Google, Yahoo and Bing.

To start a search, type what you want to know more about into the Search box and click on the magnifying glass.

If you want to search for a phrase, put it in "quotation marks" (use the marks with two strokes). Otherwise the search will be for the individual words.

Google, Yahoo and Bing

SURF THE INTERNET MATCHING GAME

Draw a line to match the internet terms with their correct definition

Search engine

The program you use to 'start' or use the internet.

Web address

A button inside a web page that takes you to a different page.

Web browser

A single page of information on the internet.

Web link

Bits of information – left on your computer by websites you have visited which let them 'remember' things about you

Web page

The address where you can find a specific website. For example www.abc.net.au is a web address.

Website

A set of pages belonging to an individual or company.

Cookies

A directory of sites. Kind of like a yellow pages for the internet.
